```java
public class User {
    String userName;
    String password;
    int score;
    boolean isLogin;

    public User(String userName, String password) {
        this.userName = userName;
        this.password = password;
        this.score = 0;
    }

    public void setScore(int score) {
        this.score = score;
    }

    public String getUserName() {
        return userName;
    }

    public String getPassword() {
        return password;
    }

    public int getScore() {
        return score;
    }
}
```
